

# Network Designer

A week in  
in the life  
of...

**AMBRA SOLUTIONS** is a telecommunications engineering firm located in Canada in the cities of Trois-Rivières and Montreal, as well as in Chile. Always on the lookout for innovations in its field of expertise, Ambra is the first Canadian company to offer private LTE solutions. From designing products not available on the market to implementing solutions for critical operations, innovation is our mainstay. Ambra Solutions offers a flexible work environment and a wide variety of projects that allow you to take on professional challenges. At Ambra, you will get...

## GOLDEN CO-WORKERS

Our team is made up of passionate people who rise to any challenge in a pleasant work environment. Strong communication between colleagues enhances teamwork and allows us to maximize our results in a stimulating environment.

## BENEFITS THAT MAKE THE DIFFERENCE

We offer a group insurance program (dental and medical), a pension plan (up to 5% employer contributions), a physical activity bonus and an employee assistance program.

## FLEXIBILITY

We offer a flexible work schedule, the possibility of remote work, a large degree of autonomy for the employee as well as outstanding professional growth and professional development opportunities (training in all areas).

As a network designer, you will plan your time according to the tasks assigned and the emails received. Here's what a typical week in the life of a network designer looks like...

## MONDAY

- You design the IP networks associated with the LTE network.
- You configure routing, VLANs, VRFs and interfaces for Cisco, HP and other network equipment.
- You interact with clients on proposed solutions and keep in touch with them as a technical reference for the project.
- You talk to project managers and managers about the progress of projects and any potential problems.

## TUESDAY

- You configure the LTE core and the Linux virtual machines related to the LTE network.
- You configure the RAN devices (BBUs, for those in the know).
- You document your work and the networks you configure.

## WEDNESDAY-THURSDAY

- You travel to the client's site to commission LTE networks (in Canada or abroad, for a variable duration, but will rarely exceed a few days).
- You carry out the necessary tests to ensure the quality and performance of the networks commissioned at the client's site.

## FRIDAY

- You provide assistance to clients following the deployment of the network when requested by the support team.
- You do the technical review of the bids made by the sales department to make sure that everything is in place.
- You provide assistance to the IP team.
